

ROKETSAN has completed the development and qualification of the new generation 2,75” Laser Guided Missile “CIRIT” and signed the first contract for the serial production for the Turkish Army requirements. Being the first guided 2,75” Missile to be under serial production ROKETSAN started the deliveries in May 2012 for combat deployment. The missile is unique due to its range up to 8km, multi purpose (Anti Armor, Anti Personnel and Incendiary) warhead, AUR characteristics and Insensitive Munition (Type V) properties. Additionally CIRIT is a ITAR free missile. The integration of CIRIT for different platforms such as Helicopters, UAVs, Heavy and Light Armored Vehicles, Naval and Land systems is run by ROKETSAN for international customers. Another unique missile is near the end of its development. UMTAS is a Long Range Antitank Missile with 8km range homing IIR Seeker with RF Data-Link and with Tandem – High Explosive Warhead also Laser Seeker option is available. The missile has LOBL, LOAL and LO-Update capabilities. The serial production is expected to start at early 2013. UMTAS and CIRIT uses the common laser seeker which enables combining both system in the same configuration for customized solution.
